

Clinical Development Excellence

What do we aim for?

Our mission is to bridge the gap between the theoretical knowledge gained through formal training and the real-world challenges faced in the workplace, thereby expediting the availability of new drug products and medical devices to improve patient outcomes.

Following a thorough examination of potential gaps in clinical development, which may encompass areas like project/risk management, process mapping, regulatory compliance, and the transition from preclinical to clinical phases, we provide selected technical training courses and follow them with on-the-job mentoring of your teams by our experts.

EyeD Pharma

" Within 6 months, we created a fully integrated Clinical Development function at EyeD Pharma. This has brought to EyeD Pharma a strong foundation allowing us to accelerate our clinical development programme for the needs of patients. "

Mithra

" In just 6 months, we were able to develop succinct cross-functionally-driven clinical trial processes where everyone knows when they need to be involved and what are their full responsibilities, leading to a more efficient and effective drug development at Mithra "

How can EC CRT help you with your clinical development?

Step 1 : Conduct gap analysis

We perform a complete analysis of your clinical research processes and procedures. This will allow us to deliver a detailed report with a related action plan enabling you to figure out how you could reach your goals.

Step 2 : Set priorities

We establish a task force, with selected core stakeholders in your company to confirm the priorities and their alignment with your company's expectations. We co-create an outline of the training and mentoring programme.

Step 3 : Deliver training

We deliver the training module(s) involving top-tier qualified trainers specialised in their respective domain.

Step 4 : Deliver Mentoring

Our mentor guides your organisation by providing "learning-on-the-job" tasks or e-tasks and technical support to your teams within an agreed framework. We provide necessary related support according to the level of experience and expertise of the mentee.

Step 5 : Ensure continuity

We propose to turn the above learning intervention into different eLearning modules, which can be used for onboarding of new incomers in the future.
